Project design phase - II
Technology architecture

Date	12-10-2022
Team ID	PNT2022TMID13175
Title	Estimate the crop yield using data analytics

Technology architecture:

The technology architecture describes the infrastructure required to support applications, operations, and reporting requirements.
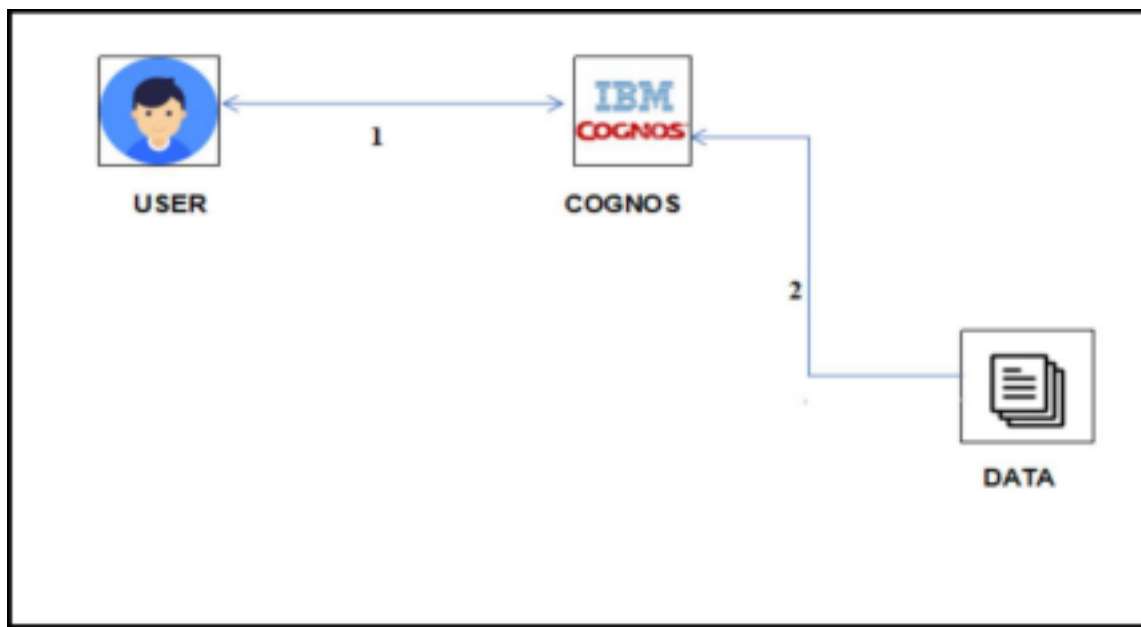

Application Characteristics:

Non-functional requirement	Description
Performance	The software will run with high performance
Reliability	The UI will be user friendly and easily understandable
Availability	The application be available for access at any time from anywhere

Scalability	The software will be scalable for larger datasets
Security	The user login and registration will be secure end to end
